

**Texas College of Management and IT**  
**Shipal, Kathmandu**  
**Lesson Plan**

**Program: BIT, 2<sup>nd</sup> Semester**

**Subject: Object Oriented Programming (C++)**

**Faculty : Kumar Poudyal**

Week	Units	Topics/Sub topics to be covered	Practical	Remarks
1	1: Introduction to object oriented programming	<ul style="list-style-type: none"> <li>• Procedural language Vs OOP</li> <li>• Characteristics of object oriented languages: Objects, Classes, Inheritance, Reusability, Polymorphism &amp; overloading</li> <li>• Applications of OOP</li> </ul>	<ul style="list-style-type: none"> <li>• Simple C++ programs using cout and cin</li> </ul>	
2 & 3	2: C++ Programming Concept:	<ul style="list-style-type: none"> <li>• Introduction to programming in C++</li> <li>• Extraction operator (&gt;&gt;)</li> <li>• Insertion operator (&lt;&lt;)</li> <li>• Type conversion: automatic conversion, cast</li> <li>• Arrays and pointers in C++</li> <li>• New and delete operators</li> <li>• Manipulators</li> <li>• Const</li> <li>• Enumeration</li> </ul>	<ul style="list-style-type: none"> <li>• Programs using extraction and insertion operator</li> <li>• Programs for type conversion</li> <li>• Programs using arrays</li> <li>• Programs using pointers</li> <li>• Use of New and delete operators</li> <li>• Program using manipulators</li> <li>• Use of const</li> <li>• Enumeration data types</li> </ul>	
4 & 5	3: Functions used in C++	<ul style="list-style-type: none"> <li>• Introduction to functions</li> <li>• Passing arguments to functions</li> <li>• Returning values from functions</li> <li>• Reference arguments</li> <li>• Returning by reference</li> <li>• Functions overloading: different number of arguments, different kinds of arguments</li> <li>• Default arguments</li> <li>• Inline functions</li> </ul>	<ul style="list-style-type: none"> <li>• Programs for passing arguments to function using passing by value, passing by reference and passing by pointer methods</li> <li>• Programs to return values by value, reference and pointers methods</li> <li>• Implementing function overloading using different number of arguments and different kinds of arguments</li> <li>• Functions with default arguments and inline functions</li> </ul>	
6&7	4: Classes and objects	<ul style="list-style-type: none"> <li>• Introduction</li> <li>• Access specifier (public, private and protected)</li> <li>• Accessing class members</li> <li>• Defining member functions: member function inside the class body, member function outside the class body</li> <li>• "this" pointer</li> <li>• Constructor &amp; Destructor: Types of constructor (Default, Parameterized and copy constructor), Overloaded constructors</li> <li>• Static data members</li> <li>• Static member functions</li> <li>• Passing objects as arguments</li> <li>• Friend functions &amp; Friend</li> </ul>		

		classes		
8&9	5: Operator Overloading	<ul style="list-style-type: none"> <li>• Introduction to operator overloading</li> <li>• General rules for overloading operator</li> <li>• Operator overloading restrictions</li> <li>• Overloading unary and binary operators</li> <li>• Operator overloading using friend functions</li> <li>• Data conversion: conversion between basic types and object, conversion between object and basic types</li> <li>• Conversion between objects of different classes</li> </ul>	<ul style="list-style-type: none"> <li>• Programs for overloading unary and binary operators</li> <li>• Programs to demonstrate data conversion of different types</li> </ul>	
10	6: Inheritance	<ul style="list-style-type: none"> <li>• Introduction &amp; benefits of inheritance</li> <li>• Types of inheritance</li> <li>• Inheritance: base classes &amp; derived classes</li> <li>• Using constructors and destructors in derived classes</li> <li>• Abstract base class</li> <li>• Public, private and protected inheritance</li> <li>• Ambiguity in multiple inheritance</li> <li>• Containership</li> </ul>	<ul style="list-style-type: none"> <li>• Programs to demonstrate different types of inheritance</li> <li>• Using constructors and destructors in derived classes</li> <li>• Implement abstract base class</li> <li>• Implement public, private and protected inheritance</li> <li>• Containership</li> </ul>	Not mentioned in the syllabus
11	7: Virtual functions and polymorphism	<ul style="list-style-type: none"> <li>• Introduction</li> <li>• Early Vs late binding</li> <li>• Virtual functions</li> <li>• Pure virtual functions and abstract classes</li> <li>• Virtual base classes</li> </ul>	<ul style="list-style-type: none"> <li>• Programs using virtual functions</li> <li>• Programs to implement pure virtual functions</li> </ul>	
12	8: File Handling	<ul style="list-style-type: none"> <li>• Introduction</li> <li>• Opening and closing file: opening file using constructor, opening file using open() and open() file modes</li> <li>• Basic functions of seekg(), seekp(), tellg(), tellp()</li> <li>• Sequential I/O operations: put() and get() functions, write() and read() functions</li> </ul>	<ul style="list-style-type: none"> <li>• Programs to open and close the file using constructors</li> <li>• Programs opening file using open() and open() file modes</li> <li>• Demonstrate the functions seekg(), seekp(), tellg() and tellp()</li> <li>• Implement the I/O operations: put(), get(), write() and read()</li> </ul>	
13	9: Templates	<ul style="list-style-type: none"> <li>• Introduction to templates</li> <li>• Function templates</li> <li>• Class templates</li> </ul>	<ul style="list-style-type: none"> <li>• Program to implement function template</li> <li>• Program to implement class templates</li> </ul>	
13	10: Namespaces:	<ul style="list-style-type: none"> <li>• Using namespace</li> <li>• Using the scope resolution operator</li> <li>• Through “using” keyword</li> </ul>	<ul style="list-style-type: none"> <li>• Program using namespace</li> </ul>	
13		Revision
